CAPTAIN

From a RIA project to a product The CAPTAIN story

Evdokimos Konstantinidis

CAPTAIN H2020 Technical Coordinator

Lab of Medical Physics, Aristotle University of Thessaloniki, Greece

WITA srl, Trento, Italy

evdokimosk@gmail.com

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 769830

OUR VISION

CAPTAIN COACH vision is to improve the adoption of technology by people in need of care by reshaping the ways of interaction.

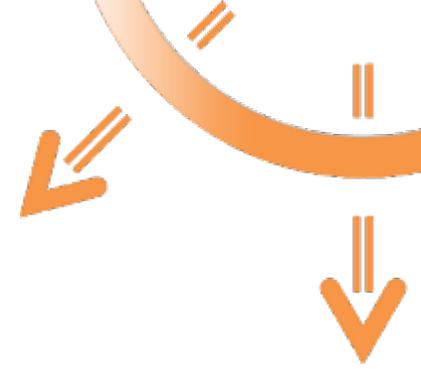

CAPTAIN COACH mission is to turn the homes of older adults into a gentle coach within an empowering space, providing intuitive interaction, guidance and help for independent living, whenever and wherever it is needed, leading to physical, cognitive, mental and social well-being.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 769830

CAPTAIN COACH

OUR SOLUTION

Radically new technology for empowering and motivating people in need of guidance and care

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 769830

CAPTAIN COACH

VALUE PROPOSITIONS FOR HELPING ELDERLY

AI Movement Analysis

Collection and assessment of data from movement and exercising inside the house

AI Emotion Analysis

Emotion analysis from face and voice

Speech Analysis

Speech analysis and speech generation to provide a multilingual, intuitive user interface

User Modeling

Using AI to model and comprehend user's behavior through non-invasive monitoring

Environmental Monitoring

Sense and adapt to environmental conditions like weather, noise and temperature

AI Behaviour Prediction

Predict everyday life behaviour and activity recognition

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 769830

Our mission...

...is to turn the future homes of older adults into a gentle coach

VYOND

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 769830

The consortium

Coordinated by

UNIVERSITY OF TRENTO

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 769830

Our deliverables were:

develop radically new ICT based concepts and approaches for empowering and motivating people in need of guidance and care

users should be involved and drive the innovation at all stages of design and development, including user acceptance, satisfaction and impact in realistic settings

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 769830

Launch of a new company based on CAPTAIN

The motivation

Include a deliverable or milestone for launching a new company. At the end of the project, you will have to deliver ;-)

MS7	Definition of business model and business take-up	WP9	4 - INI-Innovation	39	Launch of a new company based on CAPTAIN
-----	---	-----	--------------------	----	--

At some point, partners started losing their real interest

The new company vision was communicated to all partners through a workshop from the Exploitation WP partner.

The vision of a new company where partners would keep their IPRs was enough to motivate them to work more effectively.

The technological partners were more motivated compared to the pilot partners.

Different skills are required for the dissemination and exploitation tasks, although most of the times are under the same WP with one WP leader.

Business
Perspective**

The support of the Technology Transfer Office

- We had 3-4 meetings with AUTH's TTO, Legal Support and the Vice Rector for Research and Lifelong Learning (Stratos Stylianidis)
- The TTO and the Legal Support of AUTH went through the Grant Agreement and the Consortium Agreement to make sure everything is fine.
 - The project was ongoing when the company was established, and some conditions should be met
 - They understood our needs for some conditions and they accepted some amendments in the agreement between RC AUTH and the spin-off

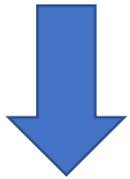

The image features a central graphic with a thick, red, textured border that has a slightly distressed or splattered appearance. Inside this border, the text "COVID-19" is prominently displayed in a bold, red, sans-serif font. The letters are filled with a fine, white, speckled texture, giving them a three-dimensional, almost crystalline look. To the left of the word "COVID", there is a red, stylized virus particle with several protruding spikes, resembling a coronavirus. The background within the border is a complex, abstract composition of various colors and textures, including shades of yellow, orange, brown, and dark blue, with a grainy, painterly quality. The overall effect is one of a digital stamp or a graphic seal.

Problem turned into opportunity?

Improved UX for:

- Deployment
- 1st time installation
- Usage
- Simplified manuals

**A project closer
to a product**

The drawback

Uncertainty for pilots

Evaluation protocol needs to be substantially amended (space for innovation though)

Scientific publications without results???
